

FastRFIDWERKS™

Corporate Fire Safety Inspection Software Commercial Buildings and Facilities

FastRFIDwerks™ – Fire Safety Inspection Application

The FastRFID Fire Safety Inspection app features Feig industrial RFID technology coupled with tablets or laptops to assure comprehensive accountability during fire safety inspections. RFID tags each have unique IDs that once affixed, require scans physically at the asset location.

Scheduled or ad hoc inspections

Never miss a scheduled inspection with the option to so an inspection on the fly

Follow-up Action Reports

An inspection fail auto-generates an action report until the issue is resolved

Example and corrective photos

Asset or location photos may be assigned as examples of an inspection guide or for remedial action

Asset Templates instead of forms

The system uses asset or location templates for defining customer fields and controls for portability, simplicity and a reference library

On-Premises implementation

Regulations often require extensive record keeping; an on-premises implementation assures your control of your data

Windows Local, Server, Cloud

Dot Net and SQL platforms are ubiquitous and familiar for support by FastRFID or your internal company IT as preferred

Have it your way customization

Software customization is available for your unique processes, circumstance and data management

Windows 10 Surface and Notebooks

Window 10 offers common deployment and a familiar easy to use interface; with an even easier wireless link to a Feig glove scanner
